EDUCATION

Texas A&M University – College Station, TX

August 2024 – May 2028

B.S. in Computer Science, Minor in Mathematics

GPA: 4.0

- **Craig and Galen Brown Engineering Honors**
- **Relevant Coursework:** Data Structures & Algorithms, Introduction to Computer Systems, Foundations of Software Engineering, Computer Organization, Discrete Structures for Computing, Linear Algebra

EXPERIENCE

Business Analyst Associate

June 2026 – August 2026

EPAM Systems

Houston, TX

- Independently designed and developed an internal **LLM routing system** that dynamically selected among candidate and reference models while retaining **98.98% of reference-model quality**.
- Built and delivered the routing system as an **OpenAI-compatible FastAPI service**, integrating a Streamlit interface, **Docker** deployment, **SQLite** telemetry, and automated testing infrastructure.
- Trained and integrated **DeBERTa-based route prediction** and **proxy-reward models** with semantic caching and prompt classification to optimize response quality, inference cost, and latency.

PROJECTS & ACTIVITIES

Bioinformatics Research Toolkit

August 2026 – Present

Neuman Lab, PiCoRNA Project, Texas A&M University

College Station, TX

- Developed a Flask-based tool that allows researchers to submit nucleotide sequences and compare them using **NCBI BLAST+**, allowing for researchers to submit data without the character limits found on Web BLAST. Viral genomes found to be unique from one another are then stored in **PostgreSQL** and sent out for bioinformatics research.
- Set up **Docker and Docker Compose** to run the application, including BLAST+ dependencies, user authentication, input validation, and rate limiting.
- Developing a Python tool that retrieves data from **NCBI GenBank** records and generates Word documents in the lab's required format, which automates data entry and allows for faster genome annotation.

Restaurant POS System

September 2026 – October 2026

Texas A&M University

College Station, TX

- Developed the backend for a JavaFX cashier interface, supporting custom orders, discounts, and automatic price and tax calculations.
- Used JDBC and PostgreSQL to save orders and manage database transactions, including rollback handling for failed operations.
- Implemented inventory tracking that automatically deducts ingredient quantities based on items purchased in each order.

S.H.A.D.E Project

August 2025 – December 2025

Texas A&M University

College Station, TX

- Implemented **TensorFlow/Keras LSTM pipelines** for next-day heat-index forecasting and heat-risk classification, transforming **25 years** of Austin environmental data into **14-day sequential windows** with 16 weather and time-based features.
- Designed stacked **LSTM, Dropout, and Dense** architectures with Adam optimization, EarlyStopping, and ReduceLROnPlateau, achieving **$R^2 = 0.80$ / $RMSE = 7.81$** for temperature forecasting and **90.6% test accuracy** for heat-risk classification.

Aggie Competitive Programming Club

August 2024 – Present

Texas A&M University

College Station, TX

- Won **1st place** in assigned category at the Spring 2025 Competitive Programming Contest as part of a team-based programming competition.
- Solve algorithmic problems in weekly practices using **data structures, graph algorithms, dynamic programming, and debugging** under time constraints.

TECHNICAL SKILLS

Languages: C++, Java, Python, JavaScript, C#, HTML/CSS

Frameworks/Libraries: FastAPI, Flask, React, TensorFlow, Keras, scikit-learn, pandas, NumPy, Matplotlib, JDBC, JavaFX

Tools/Technologies: Git, Linux, Docker, SQLite, PostgreSQL, Maven, Streamlit, Jupyter Notebooks
